

WSTA1250 Week 4 Lesson 2
Practice Tasks for Excel
INSTRUCTIONS

General instructions:

- You need to solve the following tasks by using Microsoft Excel.
- Make sure that you save your progress on the workbook in Excel frequently as you progress.
- Interpret, compare and discuss your results with others.

You are part of the analytics team at EventPro, a company that organises large-scale professional events. Your team is preparing for an upcoming conference and needs to analyse attendee data to personalise welcome packs, allocate gifts, calculate event costs, and apply discounts. Additionally, you'll be categorising attendees based on their engagement history and verifying organisational and country details.

Using the dataset provided in [Attendees.xlsx](#), which can be downloaded from your iLearn site. Complete the following Excel tasks to support event planning and ensure a smooth experience for all participants.

Task 1

On the **Attendees** sheet is a table showing people who will be attending our next event. We wish to include a welcome pack for relatively new people. In **K7**, create a calculation to check if the **Start Date** is on or after the date shown in **U14**; if it is, put the text **New** in the column, otherwise leave it blank (do not put a space or FALSE). Because it is a table, your calculation automatically copies down. What is the number of new people as shown in **V14**?

A: 45 B: 361 C: 362 D: 354

Task 2

We wish to give a gift to loyal members. In **L7**, create a calculation to put the value **Gift** in the cell if the attendee joined before 2016 or has attended 6 or more events; otherwise, leave it blank. What is the total number of gifts required as shown in **U24**?

A: 184 B: 202 C: 221 D: 185

Task 3

The organisers have decided that they cannot afford so many gifts and have changed the formula so that it only returns a **Gift** if the attendee joined before 2016 **and** has attended a minimum of 6 events. What is the updated number of gifts required as shown in **U24**?

A: 38 B: 41 C: 92 D: 128

Task 4

Prices for the event are shown in **V7:V8**, people attending for just one day pay \$350, but people attending more than one day pay \$300 per day (i.e. someone attending 3 days pays \$900). Column **N** tells us how many days they will be attending. Create a calculation in **O7** that will check how many days they are attending and calculate the correct cost accordingly. What is the total cost for all attendees as shown in **U25**?

A: \$113,950 B: \$230,050 C: \$224,700 D: \$262,150

Task 5

Discounts are awarded to loyal members. People who have attended 10 or more events get a 20% discount off the full price, and people who have attended between 5 and 9 events (inclusive) get a \$50 discount off

*This material is provided to you as a Macquarie University student for your individual research and study purposes only. **You cannot share this material publicly online without permission.** Macquarie University is the copyright owner of (or has licence to use) the intellectual property in this material. the full price. If an attendee does not qualify for a discount, they pay full price. In Column **P**, calculate the price after the discount, e.g. for someone attending for 1 day who has attended 6 events, the **After Discount** price will be \$300. What is the total **After Discount** price as shown in **U26**?

A: \$16,440 B: \$212,260 C: \$204,760 D: \$217,910

Task 6

Attendees are awarded a status based on how many events they have attended, as shown in **T19:U22**. Attendees who have attended 1-9 events get **Bronze**, 10-19 **Silver**, 20-29 **Gold**, and 30+ get **Platinum**. In column **M**, use a calculation to determine each attendee's status. What is the total number of **Silver** attendees as shown in **V20**?

A: 19 B: 72 C: 87 D: 64

Task 7

When using an approximate (or Range) **VLOOKUP**, the last argument is optional, but when using an exact match **VLOOKUP**, the last argument must be set to **FALSE** or **0**.

A: TRUE B: FALSE

Task 8

Column **F** contains the organisation code for each attendee. Use this information to look up the **Organisation name** from the list provided in the **Lookup Lists** sheet. (Use defined names or tables to make this easier.) How many attendees are from **Colot** (shown in **V15**)?

A: 30 B: 5 C: 1 D: 0

Task 9

The country code for each attendee is shown in Column **H**. Use this information to look up the **Country name** from the list provided in the **Lookup Lists** sheet. (Use defined names to make this easier.) How many attendees are from the **United States** or the **United Kingdom** (shown in **V16**)?

A: 52 B: 111 C: 9 D: 0

Task 10

In Task 9, you had to look up the **Country Name**. This could be done using an **XLOOKUP** or **VLOOKUP**

A: TRUE B: FALSE
